- Odor Control.
- Hospitality.
- Pharmaceuticals and Healthcare.
- Vector Control and Organic Agriculture.

GREEN SOLUTIONS

GREEN SOLUTIONS

SMS GROUP is a provider of green and eco-friendly cleaning, sanitization and disinfection solutions, we offer a unique combination of concept engineering, specialized bio-products and waste treatment solutions that focus on the reduction and elimination of process waste and chemical traces at the source of the waste. As a niche service provider, SMS offers proven and advanced environmental technologies for sectors such as:

ODOUR CONTROL

The odour control process uses plant-based products to eliminate foul odour by breaking the molecular bonding of odour causing compounds such as bio-films found in washrooms or decomposing organic material in treatment plants and landfills.

Unlike other products tasked with the same application, our products do not just mask these unpleasant odours but rather destroys them or renders them inert thus tackling the root of the odour. Hence, while the user may need to use other odour control products a number of times in the same day, our solution minimizes both usage of the product and time taken to deal with the odour issue.

WASTE WATER TREATMENT

Traditional disinfection and cleaning of water bodies tend to focus on chlorine as the product of choice but there are several shortfalls with chlorine that can lead to disastrous and expensive consequences. These include the creation of thick chlorine deposits and sludge at the bottom of water bodies and surrounding terrain, this concrete-like deposit is extremely hard to break down and traps numerous heavy metals within it, thus contaminating the water, furthermore it produces a greenish hue on the water that is deemed quite unpleasant by visitors and attracts small insects known as midges on the water's edge.

By replacing chlorine with our bio-enzymatic blends we can ensure the breakdown of all such residues in the water body along with the removal of heavy metal particulates, the sickly green color and any midge infestation, this can be done in a cost-effective manner and provide clients with the cost-saving of not having to employ separate entities for sludge and chlorine deposit removal.

ETP/STP

The use of chemical detergents, caustics and PH balancers create an extremely complicated usage environment for treatment plants that are required to maintain certain parameters within water before releasing it on to natural bodies. Along with these complications there are always trace amounts of chemicals that are able to move through the treatment plants and into the water-bodies causing water contamination and increase in algal blooms. On switching from these solutions to our organic enzymatic blends, plants managers can be sure of a reduction of COD, BOD, TSS indicators, making them fall within the norms set by extremely easy to use and will eliminate all trace amounts of chemical left in the water, thereby releasing holistically treated water into the natural body.

ALL-ROUND DISINFECTION

Our disinfectant solutions use effective and long-lasting hydrogen peroxide based complex formulation with plant extract stabilization gel. The products used are safe and highly effective and have a rapid as well as long-lasting disinfection. The disinfection products fully break down into water and oxygen leaving no residue. Our products require minimum personal protection equipment (PPE) to be used during application and are proficient in destroying bacteria, viruses, algae, yeast and molds.

INSECT & BUG CONTROL

The insect control process uses a multi-enzyme water-soluble concentrate made from all organic ingredients, which are non-hazardous, non-flammable, completely biodegradable and non-toxic to plant and animal life larger than the target insects. This method is completely environmentally safe making it a much more attractive solution than processes involving harsh chemicals such as DDT and other chemical pesticides. The mechanism we use targets insect larvae rather than grown insects, which only have lifespans of a few days, thus ensuring any large larvae colonies are destroyed and any surface our product is used on remains non-toxic.

CLEANING DEGREASING SANITAZATION

The cleaning and degreasing process uses non-toxic and biodegradable products to clean, degrease and treat organic matter. It involves the partial or complete cleaning of premises using our enzymatic products, the benefits of using Green Erect Products extend to removing harmful chemicals from an environment that we constantly come in contact with. Areas such as kitchen and bathrooms require proper sanitary care but can negatively affect health if large amounts of chemical cleaners are used. Our products also provide multi-faceted functionality, the excess cleaning solution created when poured down drains helps remove organic particulates that may cause blockages and can contain mal-odour to a certain extent.

CLEANING IN/OUT-PLACE (CIP-COP)

By adopting our enzymatic solutions, major industries that utilize CIP and COP processes can be greatly benefited. Industries such as Food-Processing, Dairy, Liquor and pharmaceuticals all utilize extremely dangerous and toxic products for their sanitization and disinfection needs. This causes delays in production schedule by rendering certain parts of the facility unusable for close to 48 hours, leading to a reduction in output and ultimately revenue. By moving away from these toxic products and to our completely green and organic blends, the time taken to disinfect safely can be drastically reduced. In some cases, our products have been able to produce desired results in as little as 20-30 minutes allowing facilities to maintain their production schedules and meet or even exceed their output targets. Finally, there is stricter regulation for what products can be used in these environments being implemented around the world and we would like to be the incentive that these industries utilize to switch from the toxic to the organic.

CLEANING SERVICES

Our clients are our partners and their interests and needs are our utmost priority. We focus on providing them with the best solutions that full their exact needs, knowing that our partnerships and alliances help us to continuously improve and extend our technical and operational knowhow, allowing us to focus on delivering innovative solutions

CLEANING SERVICES

RESEDENTIAL COMMERCIAL INDUSTRIAL

- Time Attendance and Access Control Systems.

LOW CURRENT SYSTEMS

SMS GROUP team is equipped with highly developed skill-set developed over years of experience not only in information technology field but also in business processes across a range of industry sectors.

This business experience makes us uniquely positioned to offer solutions promising greater operational efficiency, productivity gains and cost saving for each of our clients regardless of their industry

INTRUDER ALARM

We understand the challenges faced when protecting your business from unauthorised access and can provide an intruder alarm system tailored to your needs. By using full integrated intruder detection technology can help you protect your premises and members of the public 24 hours a day, 365 days a year. Offering a great range of burglar intruder alarms systems from highly established brands including Honeywell.

ACCESS CONTROL SYSTEMS

In the fields of physical security and information security, access control (AC) is the selective restriction of access to a place or other resource. The act of accessing may mean consuming, venturing, or using. Permission to access a resource is called authorization. our products varies from single door access control and standalone webhosted access control to integrated systems capable of managing thousands of doors points.

FIRE ALARM SYSTEMS

Fire alarm systems are essential for the adequate detection and warning of a fire situation within commercial and residential premises. The detection, visual and audible requirements of a fire alarm system are dependent on the layout and use of the building. It is due to the diversity of these applications that fire alarm panels and related accessories have been developed to meet these varying needs.

GET ALL SOLUTIONS

“We strive to provide the desired outcomes, high standard services to exceed the differentiate needs of our customers”

Business Development Strategies is a combination of numerous individual tasks which has a goal of implementing and developing growth opportunities either within the organization or between two or more organizations.

It is a mixture of commerce, business and organizational behaviour theories.

Business development deals with the establishment of long term value factor for an organization from the markets points of view.

We have a proven track record of delivering in-house, eLearning, virtual learning and blended learning to many companies and recognized organizations.

As leader in professional training we provide innovative learning and development solutions, covering multiple areas and industries, tailored to meet your needs.

Our training are delivered in both face-to-face and eLearning environments, ensuring training objectives are achieved no matter where you are.

It is essential to keep up with developments in standards, regulations and technology. Individuals and businesses who are given proper training and support in their professional development are likely to be more motivated with an advanced knowledge base leading to an increase in overall productivity.

IN-HOUSE DESIGN

We can quickly add value to your business with our treatment of aesthetics and textures in your new retail or hospitality unit.

We have planning consultants working with our commercial building architects. We can strategise your practical needs to advance your business and save you money by specifying your materials. Every beautiful design starts with a plan and vision, enhanced with perfect lighting and brought to life with texture and colour.

The result is a design that is practical and stylish and exactly the look you're after. Designed Space will transform your office or home into a space you love to be in.

We are aiming to formulate a strong design foundation from which we can all work together as a team.

We have technical expertise and can support you at each step

We aim to create a story with each client according to this we start first with a design development checklist we begin to create a three dimensional canvas.

We go the whole way from obtaining the change of use planning permission to interior design and branding.

We design residential, commercial and industrial spaces and are fluent in the language of design trends and styles, from traditional to classic contemporary.

Your design will not only incorporate your taste and style, it will fit your life. Your customised design scheme will show you the end result before we begin with lots of images, plans, and samples. You can ask questions, make changes and together we can explore alternatives.
